

# Ibrahim Sulyman

## Cloud & DevOps Engineer

### Professional Summary

- **Cloud/DevOps Engineer with Geology Background** - Combining B.Sc. Geology (Al-Hikmah University, 2024) with hands-on DevOps experience. Specialized in building infrastructure for geological data management, spatial analysis pipelines, and earth sciences digital transformation. NYSC completion at COMEG Council of Nigerian Mining Engineers & Geoscientists - data management for mining engineers and geoscientists. Skilled in automating geological data workflows, managing cloud infrastructure, and bridging scientific and engineering domains.
- Solid foundation in **Infrastructure as Code, Linux system administration, and cloud networking**, with a passion for delivering secure, automated, production-ready cloud solutions.

### Technical Skills

- |                                                                                                           |                                                                                                                  |                                                                                                   |                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
|  AWS Cloud Services       |  Version Control, Collaboration |  CI/CD Pipelines |  Infrastructure as Code                |
|  Configuration Management |  Containerization               |  Databases       |  System Administration, Bash Scripting |

### Tools & Technologies

- **Infrastructure as Code (IaC):** Terraform
- **Configuration Management:** Ansible
- **CI/CD & Automation:** Jenkins, GitHub Actions, Maven Build Tool, Nexus Artifact Repo, SonarQube Code Scanner
- **Cloud Platforms:** Amazon Web Services
- **Cloud Services:** EC2, Route 53, S3, VPC, DynamoDB, IAM, CloudFront, API Gateway, Lambda, CloudWatch, EFS, RDS
- **Containers:** Docker
- **Version Control:** GitHub
- **Operating Systems:** Linux (Ubuntu, CentOS, Amazon Linux)

### Work Experience

- **National Youth Service Corps – COMEG (Council of Nigerian Mining Engineers & Geoscientists)**  
*Place of Primary Assignment – COMEG*  
*2025 - 2026*
  - Managed and processed technical data for mining engineers and geoscientists, ensuring data integrity and accessibility
  - Developed automation scripts to streamline geological data workflows, reducing manual processing time
  - Bridged communication between technical IT systems and geoscience data requirements
  - Implemented digital documentation systems for geological reports and mapping data
  - Leveraged geology fundamentals (sedimentology, hydrogeology, geophysics) to interpret and validate technical datasets
- **Cloud & DevOps Engineer – IOTB Tech Fellowship · Remote**  
*April 2026 – Present*
  - Designed and deployed an ERP system using Docker containerization, Caddy reverse proxy, and DuckDNS for domain management
  - Automated deployment pipelines using Jenkins and GitHub Actions, reducing manual deployment errors
  - Built infrastructure as code with Terraform for reproducible environment provisioning
- **Cloud & DevOps Engineer (Self-Learning) – GitHub Personal Projects · Remote**  
*Jan 2024 – Present*
  - Designed and deployed **Automated Containerization CI/CD pipeline** for a Java web application on **AWS**, integrating **Terraform, Jenkins, Docker, Tomcat, and Maven** for end-to-end automation.
  - Designed and deployed AWS infrastructure with **Terraform (IaC)** using modular and remote state configurations.
  - Automated server provisioning and configuration with **Ansible playbooks**, ensuring consistency and reducing manual setup.
  - Built and optimized **CI/CD pipelines with Jenkins**, integrating Docker to streamline builds, testing, and deployments.
  - Deployed and managed a **three-tier LAMP stack** and serverless applications on AWS, demonstrating cloud-native and event-driven architectures.
  - Published hands-on projects on **GitHub** to showcase expertise in automation, scalability, and infrastructure management.

### Selected Cloud & DevOps Projects

- **Automated Containerization** - Terraform, Jenkins, Docker, Tomcat, AWS  [View Project on GitHub](#)
- **Automated Resume Pipeline** - GitHub Actions + Node.js + Puppeteer  [View Project on GitHub](#)
- **AWS Infrastructure Deployment** - Terraform + Jenkins  [View Project on GitHub](#)
- **Configuration Management** - Terraform + Ansible + Jenkins  [View Project on GitHub](#)
- **Monolithic Java App** - Terraform, Jenkins, Maven, Nexus, Sonarqube, Tomcat  [View Project on GitHub](#)
- **Jenkins CI/CD** - Tomcat deployments  [View Project on GitHub](#)
